

# DG 922 RECEIVER

## FEATURES:

The DG 922 receiver is designed to handle the **medium-to-stubborn and tough-to-train** dogs.

It has a battery light indicator so you can know when your collar needs to have the battery replaced.

It works well with dogs that are runners such as Huskies, Labs and hunting dogs.

This receiver is **waterproof** provided it was not damaged or abused.

The **fail safe feature** shuts the receiver down 30 seconds after it has been activated. The receiver will reset itself once it has been removed from the signal field for 3 seconds. This feature assures that your pet will not be continuously stimulated if accidentally caught in the signal field.

The receiver provides a **pulsating stimulus**, so that your **Dog Guard professional dealer** can adjust the stimulus to match your pet's temperament.

This receiver can be ordered in the encoded mode or in the non-encoded mode; with or without a one-second delay.

The receiver in the encoded mode is **immune to stray signals** and provides **up to 32 levels of initial stimulation** that is controlled at the transmitter. When the pet enters the first signal field, it will receive a warning tone or stimulation. Should the pet stray into the second signal zone, the receiver will automatically increase to a stronger stimulus. The maximum stimulus can be controlled by using shunts.

When ordered with a **one-second delay**, the pet will receive a **one-second audible warning prior to stimulation**.

It is available in **two frequencies**.

Dimension: Width: 1 3/16 Height: 1 1/8  
Length 2 1/4

Material: Lexan/ABS  
Probe Spacing: 1 1/8  
Weight: 2.2 oz.
